## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

### ***Specification***

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

The following title is suggested: --A METHOD OF MANUFACTURING A LONGITUDINAL MICROSOLENOID--.

3. There are no descriptions of the figures in the specification such as Fig. 3 A-N, Fig. 6A-B, Fig. 7 A-N, Fig. 16 A-H, Fig. 17 I-Q, Fig. 20 A-H, and Fig. 21 I-R. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

### ***Drawings***

4. Figure 26 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in

Art Unit: 3729

compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Objections***

5. Claim 3 is objected to because of the following informalities: The phrase "the base" as recited in line 12 appears to be --a base--. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claim 8 is rejected under 35 U.S.C. 102(b) as being anticipated by Yoshiyuki (JP 52046787).

Yoshiyuki teaches a spirally wound coil comprising a substrate (1), metal layers (4, 7) and an insulating material in between the metal layers as shown in Fig. 1 a-f<sub>2</sub>.

***Allowable Subject Matter***

7. Claim 3 is allowed.

8. The following is an examiner's statement of reasons for allowance: The prior art of record fails to disclose the claimed invention. The closest reference Takeshima et al. (JP 60173737 A) teach a process of making a stamper for the optical disk including steps of stacking an insulating material (7) on a substrate (6) as shown in Fig. 4b, coating a photosensitive material (8) thereon as shown in Fig. 4c, and exposing and then developing the photosensitive material using a laser beam to form a spiral photosensitive material (8) as shown in Fig. 4f and a process of forming an insulating material under the photosensitive material into a spiral shape by etching as shown in Fig. 4g. However, Takeshima et al. fail to teach process of stacking a metal on the substrate such as a process of coating a photosensitive material and exposing and developing the photosensitive material using a mask D to leave the photosensitive material covering only the metal on the base of the spiral structure, and conducting high-temperature treatment, etching the metal that is exposed, and then removing the photosensitive material, wherein the mask C being such that a light-shielding film capable of controlling a light transmittance from 100% to 0% annularly and continuously is provided on a glass through which a light is transmitted by 100%, and such that the mask D has an annular light-shielding film with a light transmittance of 0%. It is not obvious taken alone or in combination of other references fairly to suggest the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
